## ABSTRACT OF THE DISCLOSURE

A method for printing on a smart card using the printer of a postage meter is disclosed. The postage meter has feed mechanism for feeding mail items past a print and the construction of the feed mechanism is such that spacing of adjacent feed rollers is greater than length of the smart card. As a result the feed mechanism incapable of feeding smart cards. Therefore smart card, the method a carrier is provided for the carrier being of sufficient length as to be engaged by the feed rollers during feeding thereof. Preferably the carrier comprises a sheet having a recess therein to receive the smart card so that the print receiving surface smart card is approximately co-planar with the surface of the carrier sheet.
